

SV3212GP

A high yielding climbing flat bean that produces straight, attractive, uniform light green-colored pods. This variety has good tolerance to both hot and cold growing conditions. A strong, vigorous plant, producing high quality pods with very slow seed development. SV3212GP has a more concentrated pod set than Polo.

Disease Profile

HR	BCMV
----	------

Features

- // Average pod length 23-24 cm
- // Strong, vigorous plant with short internodes
- // Good hot and cold tolerance
- // Light green, uniform pods

Advantages

- // Increased pod quality and uniformity
- // Higher yields
- // High pod quality

Benefits

- // Flexible and grower friendly
- // Less cost and better profitability
- // Suitable for all cropping cycles

Agronomics and Cropping Tips

Environment

- // Protected, Unheated

Season

- // Year round

Specific advice

- // SV3212GP has a more concentrated pod set than Polo. If a grower needs to produce beans for a longer period, better to split planting. The highest yield is in the first 6 to 7 picks.
