

SV5581PH

SV5581PH is a half long green to red maturing capsicum for unheated greenhouse production and comes with a strong disease resistance package and high production potential.

Disease Profile

HR	Tm:0-3
IR	TSWV:0

Features

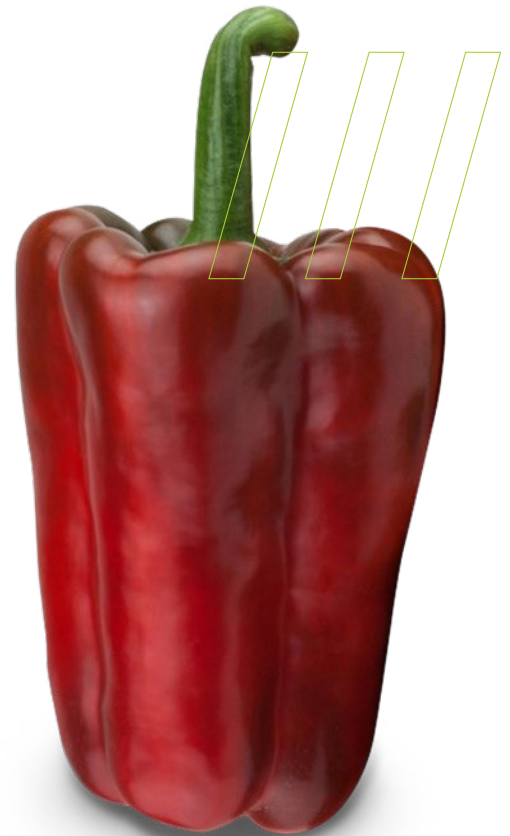

- // Vigourous and strong plant habit and external fruit setting
- // Thick walls for better firmness, big shoulder, low level of anthocianin
- // Uniform fruits, mainly 4 locules
- // 10-20% heavier fruit than main competitor

Advantages

- // Strong disease package
- // Less risk for grower
- // Improved fruit quality in terms of shape, weight, smoothness and firmness
- // Shallow to medium pedicel cavity depth
- // Extremely suitable for Green harvest due to slower ripening process
- // Superior shelf life

Benefits

- // High yield potential
- // Easier to pick as the fruit is less effected by internal placement
- // Boost your returns with superior fruit weight
- // Potential for higher returns through heavier fruit and easier packing
- // With heavier fruit it requires less fruit in a box, reducing the risk of damage during transport

Agronomics and Cropping Tips

Environment

- // Protected, Unheated

Season

- // Spring

Specific advice

- // Well suited for later planting dates
- // Avoid vegetative irrigation during early growth stages
- // Avoid excess nitrogen strategy until crop is maturing
- // Plant and fruit development responds well to a generative strategy
