The **Seminis**[®] global melon portfolio builds on a strong range of reliable standards as well as new products that offer better quality to the value chain and consumers. These benefits come with continued investment in agronomic traits—such as the **Cyro Line**[®]—to support the success of your suppliers and the reliable year-round availability of fresh melons from your global supply chain.

We understand that your success is not built on a single variety or from a single production region. This catalog is designed to make it easier for you to build a stronger melon offering with high quality products, whether you are looking to fill a specific gap or build a full program for year-round supply. You will find an availability summary at the back of the catalog summarizing all the segments, varieties and places of origin.

Our team is prepared to advise on which genetics best meet your needs across a variety of production regions.
